FOR IMMEDIATE RELEASE
October 6, 2016

GEOSTRUCTURES NEW HIRE!

Purcellville, VA, October 6, 2016– GeoStructures is pleased to announce the addition of Abiy Ghirmay to the Geo family.

Abiy Ghirmay, EIT recently joined GeoStructures as a Design Engineer. He is responsible for supporting GeoStructures' customers by preparing final engineering designs for the construction of ground improvement technology. Abiy completed his Bachelor's degree in Civil and Environmental engineering in 2014 and Master's degree in Geotechnical engineering in 2016, both from the University of Arkansas. While attending the University of Arkansas, he completed his undergraduate research work in Earthquake Liquefaction and published his thesis on Asbestos cement pipe condition assessment techniques. Abiy is an accomplished soccer player and served as Soccer Team Captain for the Independence Pirates, a college soccer team in Independence, KS.

About GeoStructures

Established in 1995, GeoStructures consists of geotechnical and structural engineers who provide marketing and design services in support of its sister company, GeoConstructors, which delivers design/build construction services for: ground improvement using Geopier technology, Rapid Impact Compaction, Ductile Iron Piles, specialized Sound Walls and Retaining Walls, and Slope Stability solutions. These technologies solve customers' challenges for controlling settlement of buildings, tanks and MSE Wall foundations, liquefaction mitigation, landslide corrections for shallow and deep seated slope failures, and grade separation options using Retaining Walls and Steepened Slopes.
